

To Whom It May Concern,

In July of 2018, Granite Inliner, LLC. (Formally Layne Inliner, LLC.) completed a sanitary sewer rehabilitation project for North West Harris County Municipal Utility District No. 29. The project included the rehabilitation of manholes using Warren Environmental 301-14 100% Solids Epoxy.

Madero Engineers, Architects & Constructors rehabilitated manholes between the months of May and June 2018. Mr. Madero was responsible for the use of non-destructive and destructive coating inspection, using instruments for performing wet gauge readings tests, destructive pull-off adhesion tests and holiday spark tests during this project. I estimate that he completed over 50 hours using the aforementioned methods during the rehabilitation process.

Mr. Madero and his firm did an exemplary job on this project rehabilitating the manholes. The consulting engineer and Owner were very pleased with their work. I have recommended Mr. Madero's firm to other consulting engineers.

Regards,

Robert Meador, Project Manager
